

Web-based solution
for allocating
and settling gas
gathering and
plant processing.

GasStream

Industry standard for integrated gas gathering, processing, transactional and accounting management and support.

Errors in accounting and data management are simply unacceptable.

Working inefficiently and ineffectively with home-grown software or cobbled-together solutions are difficult and expensive to manage. One example is the use of spreadsheets, which are great tools for analysis; but having financial data in a hodgepodge of spreadsheets makes it hard to maintain one version of the truth. This is where spreadsheets start to break down, leading to confusion, frustration and costly mistakes in the workplace. Employees want their jobs to be seamless and employers want accurate results.

GasStream organizes your assets and maximizes profitability at no risk. It can be customized for task such as forecasting, nominations, checks and balances, improved data accuracy and invoicing. Using a guided method that encompasses your entire daily workflow, GasStream offers a well-defined process to help relieve much of the confusion and frustrations your team faces. With our powerful, easy-to-use and secure application, modeling your business processes are streamlined to empower users to focus more on business.

GasStream flexibility keeps your organization one step ahead in a competitive market.

GasStream physically and contractually allocates volumes, applies fees and rates and financially settles your assets. Invoices are created for simple gathering/redelivery or for processing fees that are invoiced separately instead of being netted out. Industry standard settlement statements are generated showing all products, volumes and pricing used to settle with the producer.

- Proactively track shipper daily imbalances
- Pay and get paid for midstream gas gathering and processing services
- Return to or pay producers their fair share of products produced at the plant

"I was super impressed with how easy [GasStream's setup] was. As always you have done a remarkable job setting this up to be very user friendly."

–Director of Revenue Accounting

Key applications

- Gathering
- Plant processing
- Allocations, settlements and invoicing
- Prior-period adjustments, when needed

Key features

- Robust auditing
- Dynamic reporting
- Powerful, easy-to-use, secure
- Scalable architecture
- Fast, modern web pages
- Web-Services based integration
- Can be hosted, installed on-premise, leased or purchased
